

# KT2 tracking sticker

ArUco DICT\_4X4\_50 / ID 0

## PRINT AT 100% / ACTUAL SIZE

Use matte white sticker paper. Turn off Fit, Shrink and borderless enlargement.

Choose the largest option that lies flat on the robot. Mount only one tag.

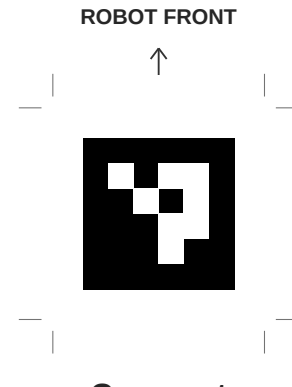

### Standard

35 x 35 mm sticker

25 mm black marker edge

5 mm white margin on each side

### Compact

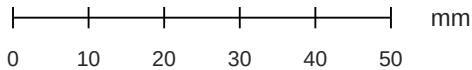

28 x 28 mm sticker

20 mm black marker edge

4 mm white margin on each side

## Check the print scale

The end ticks below must be exactly 50 mm apart on the printed sheet.

## Cut and mount

1. Cut between the crop marks, keeping the entire white border.
2. Mount flat on top of the body, with the tag's top edge toward the robot's front.
3. Keep the pattern unobstructed; avoid wrapping it over a curved surface.
4. If using plain paper, fix it underneath with double-sided tape; avoid a glossy cover.

## Tracking settings

Dictionary: DICT\_4X4\_50   Marker ID: 0   Border bits: 1

Marker side length: Standard = 0.025 m; Compact = 0.020 m.

Measure the black square edge, including its black border, excluding the white margin.

Both options encode the same ID. Keep the spare and this sheet outside the camera view.

US Letter / A4 at actual size. Physical fit on this KT2 has not been measured.

Pattern generated with OpenCV. Reference: OpenCV ArUco marker documentation.
